

As part of BS5837:2012, British Standard for Trees in relation to design, demolition and construction – recommendations, it is now a requirement to provide an indication of proposed new tree planting as part of the assessment. Whilst not a hard or soft landscaping plan, such plans provide details of the position size and specifications for tree planting based upon a detailed assessment of the site, its history and the permitted development.

As a company, we work and liaise with Barcham Trees, the UK's leading tree supplier of container grown trees and their young tree consultancy practice to provide the best possible advice on the selection, planting and management of young trees as part of the development process, thus ensuring the successful establishment of trees for future occupants.
